

Cell Phone Use

Read the text and complete the table. Write % in your answers when needed. Some of the information has been filled in for you. There is an example at the beginning (0).

Demographics of Teen Cell Phone Use

Beyond age, there are few differences in mobile phone ownership by personal characteristics.

Girls (72%) and boys (70%) are equally likely to own a phone and there are no differences by race or ethnicity in phone ownership: 73% of the White/non-Hispanic population, 64% of the Black/non-Hispanic, and 71% of the Hispanic/English-speaking population own mobile phones.

Internet users (72%) are more likely than non-users to have a cell phone; however, half of teens who do not go online do own a mobile phone (51%).
