

Golden Gate Bridge

Read the text. Then complete the table below using numbers and feet, kilos, miles, years, minutes, etc. when needed. There is an example at the beginning (0).

Did You Know? 	The construction of the Golden Gate Bridge began on January 5, 1933. The bridge opened to pedestrian traffic four and one half years later on May 27, 1937. It opened with a grand celebration and vehicles were allowed on the roadway the following day. The cost of building the bridge was 35.5 million dollars. It is constructed with two towers, 746 feet (227m) tall, from which two main cables, 36½ inches (.92 m) in diameter, are strung. At 50 foot intervals steel rope hangs from the two cables to support the concrete roadway and sidewalks below. The Golden Gate Bridge is a connecting link on U.S. Highway 101 stretching from Mexico to Canada along the Pacific Coast. The bridge connects the City and County of San Francisco to the south and Marin County and other California destinations to the north.
